SUMMARY

Software development student with a strong foundation in Data Structures, OOP, and database systems. Experienced in building RESTful APIs and full-stack web applications utilizing Java, Spring Boot, React, and SQL, alongside machine learning integration. Aiming to leverage technical expertise in a Software Development Engineer role.

EDUCATION

National Institute of Technology, Raipur

Master of Computer Applications (MCA), CGPA: 8.58/10

Raipur

2024–2027

M.P. Sinha Science College

Bachelor of Computer Applications (BCA), 82.04%

Muzaffarpur

2021–2024

TECHNICAL SKILLS

Languages: Java,C, JavaScript,Python

Frontend: React.js, HTML, CSS, Responsive Web Design

Backend: Spring Boot, RESTful APIs ,MVC Architecture, JWT Authentication

Database: MySQL, SQL

Machine Learning: Scikit-learn, LightGBM, Pandas, NumPy, Matplotlib

Tools: Git, GitHub, Postman, Docker, Cloud Fundamentals

Core CS: Data Structures & Algorithms, Object-Oriented Programming, DBMS, Operating Systems, Computer Networks

PROJECTS

Garbage Management System

React.js, JavaScript, CSS3, Spring Boot, MySQL, REST APIs

- Developed a full-stack Smart Waste Management System using React.js, Spring Boot, and MySQL with secure role-based authentication for Users and Admins .
- Implemented a complaint reporting module enabling residents to submit garbage location details and track request status in real time.
- Designed an Admin Dashboard for monitoring complaints, updating collection schedules, and managing waste collection operations efficiently.
- Built RESTful APIs for user management, complaint tracking, and collection workflow management to ensure seamless frontend-backend integration.

Memory Card Game | HTML, CSS, JavaScript, React.js

- Built an interactive card-matching game using React.js component-based architecture, implementing game logic for card-flip animations, pair-match validation, and turn tracking.
- Managed complete game state using React Hooks (useState, useEffect) for card selection, match detection, flip-back logic, and win conditions to ensure smooth gameplay.
- Designed a responsive UI using CSS Flexbox and Grid, ensuring cross-browser compatibility and consistent performance across desktop and mobile devices.
- Optimized component re-rendering and state updates for efficient performance, delivering a lag-free user experience throughout the game session.

DDoS Attack Detection using CIC-DDoS2019 Dataset

Python, Pandas, NumPy, LightGBM, Matplotlib

- Analyzed the CIC-DDoS2019 dataset to detect and classify DDoS attacks using supervised machine learning techniques.
- Performed data preprocessing, feature scaling, class-balancing, and exploratory data analysis (EDA) to enhance data quality.
- Trained and evaluated multiple classifiers including LightGBM, Random Forest, and Decision Tree, incorporating feature importance analysis.
- Optimized models using Grid Search and Random Search, achieving 96.5% classification accuracy with LightGBM over baseline configurations..

Certifications

- HackerRank Skill Certification – Java (Basic)** Jul 2026
Certificate
- HackerRank Skill Certification – Frontend Developer (React)** Jul 2026
Certificate
- IBM SkillsBuild – Generative AI Essentials** Jun 2026
Certificate
